I am dedicated Libyan public health researcher and trainer with over a 8 years of experience in epidemiology, communicable disease control, and public health emergency response. Throughout my career, has combined scientific rigor with strong organizational and analytical skills. has served in key public health institutions, including the Biotechnology Research Center (BTRC) and the National Center for Disease Control (NCDC) in Libya, my work has focused on research design, data collection and analysis, and developing response strategies for public health crises.

WHO certified trainer in the Community Health Worker program and a **EMPHNET certified basic field epidemiology officer**. has conducted and facilitated numerous training workshops both nationally and internationally, including programs supported by **WHO, UNICEF, ECDC, and USAID**. These trainings covered epidemic preparedness, flood response, and social and behavioral sciences for disease outbreak response.
